

Technical Documentation

This repository contains a Next.js 13 (App Router) site. Key points:

- Run locally: npm install then npm run dev (port 3000)
- API routes:
 - POST /api/contact — accepts { name, email, company, message } and sends email via Resend when configured.
 - POST /api/newsletter — accepts { email } and subscribes to Mailchimp when configured.
- Environment variables required for full functionality:
 - RESEND_API_KEY, CONTACT_FROM_EMAIL, CONTACT_TO_EMAIL — for contact emails via Resend
 - FORMSPREE_FORM_ID — for a Formspree fallback if Resend is not configured
 - MAILCHIMP_API_KEY, MAILCHIMP_LIST_ID — for newsletter signup
 - HUBSPOT_API_KEY — optional HubSpot CRM forwarding for new contacts
 - Zoho_ACCESS_TOKEN — optional Zoho CRM forwarding for new contacts

Files added by handover scripts:

- src/app/services/[slug]/page.tsx — dynamic service pages
- src/marketing/contact-form-section.tsx — client form that posts to /api/contact
- src/app/api/contact/route.ts — contact API route
- src/app/api/newsletter/route.ts — newsletter API route

To generate PDF handovers locally, see package.json scripts and run npm run generate:pdfs (requires markdown-pdf via npx).
